Batten Receptacle 1622

The 1622 is the latest addition to Rutgerson's popular batten receptacle range, and the largest so far - suitable for boats up to 90ft monohull and 80ft multihull. With the same user-friendly design as the smaller versions no tools are required to open the lid. Simply press the button whenever you need to insert or remove a batten. The batten tensioning can easily be adjusted up to 70 mm, and the lid has an indicator to show the ultimate trim.

Like all other products from Rutgerson this batten receptacle is designed and produced in Marstrand, Sweden. It is made of black anodized aluminum and stainless steel, and can be used with M12 threaded battcars.

This product is available for orders 1 January 2018.
