November 2018

Deck Fillers

All Rutgerson's Deck Fillers are now available in the two common hose sizes 38mm and 50mm as well as a third size, 54 mm, for fuel. All of them made in durable composite, which means that there is no need to worry about grounding or corrosion. They are also much lighter than any similar products in casted-steel.

The range includes fillers for diesel, petrol, water and waste, all color-coded to distinguish one from another. These fillers also have a unique and reliable link system made in the same weather-resistant nylon as used on cable ties.

Like all our other products these deck fillers are designed and manufactured in our factory in Marstrand, Sweden.

The fillers are injection molded in high-strength composite and come with a top cap in high grade stainless steel for a classy look.

All deck 38mm and 54mm deck fillers have a bayonet-lock, whilst the 50 mm fillers and the waste versions have a traditional thread-lock. The latest additions to this range are the 50mm deck fillers for diesel, petrol and water. These will be available for orders 1 January 2019.
