

Slide Connector 1529

The Rutgerson Slide Connector is a simple, yet clever product designed to be used as a linkage between our batten receptacles and pressure absorbing slides. It effectively transfers the pressure from the batten onto the slide and works as a cost-efficient alternative to standard battcars on boats up to 35 feet.

Like all our other products the slide connector is made in our factory in Marstrand, Sweden. It is made of stainless steel and black composite and has a threaded M10 stud in one end and a universal toggle in the other.

The Slide Connector is developed exclusively for Rutgerson's Pressure Absorbing Slides and recommended to be used with batten receptacle 1580 or 1587.

This product will be available from 1st of January 2020.
