

Batten receptacle 1587 & 1597

The batten receptacles 1587 and 1597 are made of a glass fiber reinforced composite which is extremely durable and UV resistant. 1587 is dimensioned for monohulls from 30-42* feet, whilst the larger 1597 is suitable for boats between 40-52* feet. Both can be used with either round or flat battens.

The clean and user-friendly design comes from our popular batten receptacle range in aluminum. No tools are required to open the lid. You simply press the button and slide off the lid whenever you need to insert or remove a batten. The tensioning is easily adjusted with a key, and the trimming can be monitored through a window in the lid.

Like all other products from Rutgerson these batten receptacles are designed and produced in Marstrand, Sweden. They fit any M10 threaded battcars or bolts and can be ordered with titanium screws for carbon sails.

The 1597 is already available for order, whilst the latest model 1587 will be launched January 1st 2020.

Part No	Product description	Color	Dimensions [mm]						Max width flat batten	Max Ø round batten	Suitable OR-batten	Fits battcar ref#	Packed per	Weight [gr]
