Multihull Escape Hatch | v.3

The Rutgerson Escape Hatch is the only certified multihull escape hatch on the market with a flush design, made to be installed on each hull of a catamaran or trimaran to provide a safe and reliable escape in case of capsizing. The unique flush design gives minimal resistance, reduces the pressure on the hatch and simplifies installation, with no recess or other adaption to the hull needed. For safety, the hatch can be opened from both the inside and the outside.

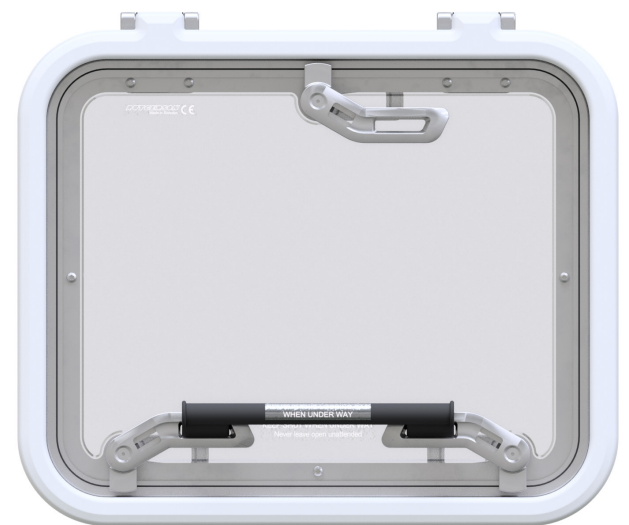

The opening lid has a 20 mm tinted acrylic with an inner frame and a solid silicone seal profile that is fixed into a milled groove in the glass. Frames, handles, and hinges are made of durable high-grade acid-proof stainless-steel.

A light composite locking bar prevents access from the outside when moored and falls off automatically if the boat capsizes. Available with or without an inner frame in off-white ABS, which is also available separately.

This hatch is CE-certified and approved according to the highest level (Area I) of ISO 12216 international standards for ocean sailing (Category A).

The Multihull Escape Hatch Version 3 is already available.

NOTE: This hatch should never be left open unattended. When under way, remove the locking bar and keep the hatch closed. Opening the hatch when sailing is strictly forbidden.

Improvements from v.2

- Simplified design with minimum number of parts.
- A third handle has been added.
- A solid and extremely durable silicone seal.
- Better & cleaner looking design.

Core benefits

- Open from inside & outside
- Innovative flushed design
- Extremely robust
- 100% waterproof
- Solid silicon seal
- Stainless steel components
