

STAINLESS STEEL CONNECTOR 1547-06, 1547-08, 1547-10

User Manual for Stainless Steel Connector 1547-XX

General

Rutgerson Stainless Steel connectors 1547-XX for round batten are specially developed for vertical battens in furling mainsails. The connector's slender design easily enters the furling mast, it's strong and easy to divide for transport and storage. The connector is available for 3 different batten diameters 6, 8 and 10mm and is combined with Rutgerson Stainless Steel endcaps 1545-XX-57, 1545-XX-85 och 1545-XX-150.

The different part of the connector

The connector consist of male case (a) female case (b) lock screw (c) (Allen screw 1,5mm).

Mounting

The connectors is mounted by (a) is insert in (b) and locked with Allen screw (c). In order to ensure the correct mounting position of the battens, the connector should be assembled as the battens are glued. For best gluing result use Araldit 2015. Put Araldit 2015 around the batten about 10mm from the end (it's important that glue does not go on the batten end so that the connector gets glued together) and rotate the batten in to the connector until it originates.
